

## RANorder

RANorder is one of the few platforms on the market that provides access to both electronic products and open outcry products. Importantly, RANorder routes directly to broker workstations in many markets, avoiding the time delays and error potential for orders routed to trading desks. It is the number one choice among our brokers who enter orders on behalf of customers and our customers who trade across a broad spectrum of futures products.

Key Features Include:

- Access to both electronic and open outcry markets
- Extensive position management tools
- Offers real-time quotes
- Pre-park orders and then transmit with a single click
- Trade pre-screening based on margin requirements; define pre-trade limits based on the margin requirements of the underlying contract.
- 24-hour operation
- Order types: all major exchange recognized orders
- Advanced options capabilities
