

X-Trader

X_TRADER sets the standard for professional trading screen performance. Loaded with advanced trading strategy support, supremely reliable and reflex-fast, X_TRADER is the front-end of choice for professional derivatives traders, brokers and market makers.

With X-Trader, you can perform everything from simple directional trades to active market making, options trading and spread trade analysis. No matter how you trade, X-Trader can help you better organize your trading efforts.

The X_TRADER toolset includes these advanced features:

- React immediately to market ebb and flow with the MD Trader™ vertical market depth display.
- Connect to multiple markets, including CME, CBOT, Eurex, Eurex US, LIFFE, Euronext, Xetra and NQLX.
- Access and trade multiple exchanges simultaneously.
- Link to Excel ® and other analytics.
- Make market orders, limit orders, multiple contract orders, calendar spreads, inter-product spreads and more.
- Enter specialized order contingencies such as GTC, FOK, IOC, Stops and more.
- Define and manage spreads easily.
- Easily access dynamic audit trail real-time fill and position details.
- View working orders, fills and market depth from a single window.
- See at a glance whether open positions are profitable relative to market conditions with average price highlighting.
- Make two-sided markets on any tradable instrument with market maker functionality.
